RESEARCH

Throughout my career I carried out applied research in numerous projects having the following main responsibilities:

- I am developing **NRGcoin** (www.nrgcoin.org) – a blockchain-based incentive mechanism for boosting green energy in **smart grids**, using real data.
- I applied **data mining** techniques on real-world **nurse rostering** data from Belgian hospitals to improve the quality of the automatic generation of personnel schedules and facilitate manual configuration of automated planning software.
- I collaborated with an independent research institute and developed techniques for **distributed timetabling** and geographical exam scheduling to facilitate course providers in planning their courses and exams.
- I developed intelligent **reinforcement learning** algorithms for emergent coordination and self-organization of **decentralized systems** and applied them in wireless sensor networks.
